

Is your Mac ready for EMERGENCY 5 ?

Before buying the game, check if your Mac matches the system requirements.

Open the Apple menu and choose the option “**About this Mac**”.

You are presented an overview over your Mac's configuration:

Most important component here is the **graphics**:

The game requires a graphics card from **NVIDIA** or **AMD**.

Attention: Intel graphics, like Iris or Iris Pro, are not supported at all!

Minimum:

- NVIDIA **GeForce GT 650M** or higher, with at least **1024 MB VRAM**
- AMD **Radeon R9 M280** or higher, with at least **1024 MB VRAM**

Recommended:

- NVIDIA **GeForce GTX 775M** or higher, with at least **1024 MB VRAM**
- AMD **Radeon R9 M290X** or higher, with at least **1024 MB VRAM**

(read more on the next page)

Check the **processor** as well:

You need an **Intel i5 or i7 Quad Core** processor with at least **2,6 GHz**.

We recommend **3,5 GHz**.

Memory:

Required is **6 GB**, recommended is **8 GB**.

In case your Mac does not match one of the requirements above, EMERGENCY will most certainly not run in a satisfying way!

Please buy the game only if all requirements are met.
